

Mousetrapper™ Advance

Slim ergonomic design with exceptional RPS™ technology

Mousetrapper™ Advance is the most sophisticated central pointing device to be developed, expressing all the important characteristics of an effective ergonomic mouse, and more.

Combining a slim modern design with the new RPS™ (Roller Pad Steering) technology with smooth and precise cursor movement, the Mousetrapper Advance offers superior comfort, flexibility and usability over other ergonomic mice - improving ergonomic posture and wellbeing while increasing the user's efficiency.

Placing the Mousetrapper Advance in front of your keyboard forms a well-balanced and strain free working position where arms are comfortably placed in-front of the body on the soft supporting wrist rests. A varied position is achieved by operating the mouse pad with either right or left hand, and by alternating between fingers. Move cursor effortlessly with hands and arms comfortably resting on the wrist rests.

The unique steering pad is intuitive and easy to use together with the integrated click buttons that can be adapted to individual requirements and work-flow. Easy to use software can be downloaded for free from www.helaus.com/mt.
